

The Only Management Software Pharmacies Need

LOC Software gives pharmacies the ability to create a single solution for managing their entire operations. It enables efficiently tracking pharmacy, over-the-counter medications, and general merchandise inventory and sales from a single intuitive interface. LOC also simplifies reporting and compliance by automating processes in our point of sale (POS) and back-office software. LOC eliminates the complexity of running a pharmacy retail business with a user-friendly and cost-effective system.

Software that Keeps Priorities Straight

LOC's ThriVersA suite of software modules allows pharmacy retailers to digitize processes and streamline compliance, giving them more time to focus on customer care and optimizing their experiences.

Inventory

ThriVersA Supply Chain allows pharmacy retailers to track high-volume, high-turnover products to ensure ample stock on hand with minimal shrink. It also enables tracking PSE and other regulated substances and streamlining reporting requirements.

POS

LOC gives pharmacy retailers the ability to operate more efficiently and enhance customer experiences. ThriVersA ePOS, the browser-based, hardware-agnostic version of LOC POS software, makes it easy to create small-footprint self-checkout and deploy mobile solutions.

Integrations

LOC enables third-party integrations via secure APIs, allowing pharmacies to integrate with top pharmacy solution providers like McKesson, Cerner, and PrimeRx. With integrations, pharmacies can access all essential information within a single system.

Providing Easy Data Access for Better Decision-Making

"The biggest advantage is accessing accurate data quickly."

— Pete's Fresh Market

What Sets LOC Apart

Giving pharmacy retailers control and access to data is central to LOC's solution. Pharmacies also benefit from industry best practices built into LOC's workflows.

System Setup

With LOC, pharmacy retailers manage all point of sale terminal and device screens centrally and deploy them across their operations. LOC also enables centralized management of peripheral devices.

500+ Function Point of Sale Software

Transactions at the pharmacy checkout vary greatly from customer to customer. LOC gives pharmacies the ability to total sales quickly, even when customers are paying for prescriptions and store items.

Data Tables and Data Exchange

LOC empowers pharmacy retailers to decide where their data resides and generate reports in the formats they need. LOC enables formatting reports easily from pivot tables with drag-and-drop functionality.

Browser-Based Software

Independent pharmacies often don't have IT resources at each location. LOC overcomes IT management by replacing client-server deployment with browser-based software, enabling centralized management and decreasing costs.

Enterprise Management

Choosing cloud deployment streamlines multi-store management. Managers can work from one location, purchasing, managing and transferring inventory, and calculating pricing, then deploy information to all stores.
